

Dev and Ollie

Mad about Maths!

- 1) If the old man had 55 kites in his shop, and he gave 15 to Dev, how many kites has he got remaining?

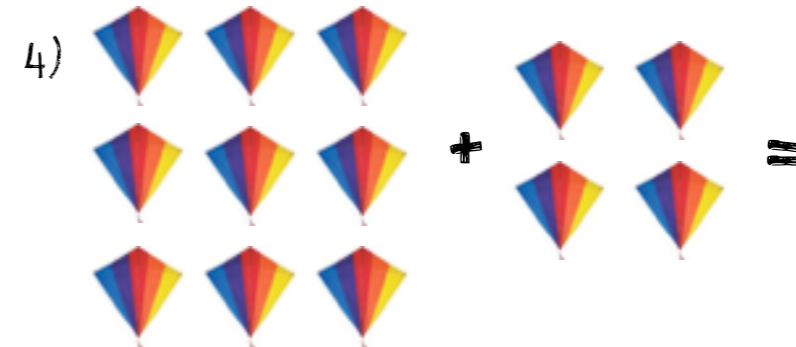

$$55 - 15 =$$

- 2) How many kites do you see here?

- 3) Dev broke 8 kites that belonged to Rahul. And he came back with 15 that the old man had rewarded him. How many extra kites has Rahul got now?

$$15 - 8 =$$

- 5) 7 people queued up outside the old man's shop to buy kites. If the old man only sold 3 kites to each person, how many kites did he sell altogether?

$$7 \times 3 =$$

- 6) Circle the two kites that are the same.
